

Guidelines for Estimating Wheat Straw Biomass Production Costs 2017

High Crop Residue Zone in Manitoba

Guidelines for Estimating Wheat Straw Biomass Production Costs High Crop Residue Zone

Date: January, 2017

The following budgets are estimates of the cost of producing wheat straw biomass in Manitoba. General Manitoba Agriculture recommendations are assumed in using fertilizers and chemical inputs. These figures provide an economic evaluation of wheat straw biomass and estimated prices required to cover all costs. Costs include labour, investment and depreciation, but do not include management costs, nor do they necessarily represent the average cost of production in Manitoba.

These budgets may be adjusted by putting in your own figures. As a producer you are encouraged to calculate your own costs of production for various crops. On each farm, costs and yields differ due to soil type, climate and agronomic practices.

This tool is available as an Excel worksheet at:
or at your local Manitoba Agriculture GO Office.www.manitoba.ca/agricultureThe Farm Machinery Custom and Rental Rate
determine machinery costs.is also available to help

*High Crop Residue generally refers to areas of Manitoba within the Red River Valley where farmers actively manage crop residue with various tillage practices. Producers should use the publication that best corresponds to their farming practices and soil type.

Note: This budget is only a guide and is not intended as an in-depth study of the cost of production of this industry. Interpretation and use of this information is the responsibility of the user. If you need help with a budget, contact your local Manitoba Agriculture GO Office.

Wheat Straw Biomass Cost of Production Summary - January, 2017

Based on 600 Acres - 60 bu grain yield and 1.52 tons straw per acre 912 Total tons Straw produced

A. Operating Costs	<u>\$/acre</u>	<u>\$/ton</u>	Your Cost
1.01 Estimated Net Nutrient Value ¹	-\$1.82	-\$1.20

1. Assumed a total of 600 acres of wheat straw biomass.

2. Assumed an average yield of 1.52 tons per acre.

3. Assumed a 15% producer markup per ton of straw.

4. Straw value is based on net nutrient value per acre.

5. Machinery and equipment costs for the wheat straw biomass enterprise are based on

custom rates. Storage facilities were valued at \$12,000 in total.

6. The budget is based on a round bale production system with outside storage.
