<sup>1</sup>Total Recreational Value derived from \$/angler/day, recruitment potential and species status (Table 2 Column F)

<sup>2</sup>Conservation Closure-applies to specific regulations in specific waters and certain species. Loss of these species would be high for that species and area.

<sup>3</sup>Master Angler-master angler specimens are highly sought after and the intrinsic value of these specimens is high.

**Note: Restitution can apply to one or more of the case specific criteria**

**Base Value** - from 2010 Recreational Fish Survey (average dollars spent per angler per day)

**Recruitment Potential** - Reproductive and survival potential of a species as it relates to the capability for replacement of its population. All species receive a valuation of at least 1. Species with a valuation of 2 produce a small amount of eggs, guard their nests, and or defend their territory around their nests. Species receiving a valuation of 3 produce very few numbers of eggs, have a late onset of sexual maturity, are usually slow-growing species, can have an intermittent reproductive cycle and/or are hatchery produced.

**Species Status** - Species are evaluated according to their species-at-risk status. Based on Manitoba Conservation Data Centre (MBCDC) as of January 2004.

Species Status	Score
S5-Secure	0
S4-Apparently Secure	1
S3-Uncommon	2
S2-Rare	3
S1-Very Rare	3
